*Presents Our
Spring Seminar*

***“The Dietitian, the MDS and the Culture
Change in Nursing Homes”***

This session will cover the vast impact that the MDS has on quality of care and quality of life issues in the Long Term and Sub acute environment. More than ever, consumers are expecting a “change” in the course of their care. As part of the interdisciplinary team, the dietitian must find ways to create and adjust to this transition and still achieve excellence by addressing individual resident needs. The participant will obtain a better understanding of the quality indicators/measures to improve quality care and resident outcomes. The participant will also learn about the new changes and challenges with the survey process, to include the new MDS 3.0, and identify the goals and objectives for the “*Culture Change*” in nursing homes.

***“A ‘Day in the Life’ of a Parkinson’s
Disease Resident and Appropriate Nutrition
Management”***

This program is designed to identify common nutrition-related concerns occurring in residents with Parkinson’s disease and how best to manage these issues to maximize their quality of life. Upon completion of the seminar, the participant will be able to identify nutrition-related conditions occurring in patients with Parkinson’s disease, assess the need for nutrition interventions for common concerns and provide medical nutrition therapy for these individuals. An overview of medication effects and supplements/foods that may be helpful will also be discussed.
